SELECTED WORK

01	**Dassault Systèmes BIOVIA**	ONE Lab batch release workflow
02	**Hope & Cope**	Service research, healthcare
03	**Manela**	Founding designer, SaaS
04	**University of Montreal**	Admission requirements UX
05	**PlanMonark**	Usability evaluation, n=16
06	**MovingWaldo**	Lead Product Designer

Dassault Systèmes BIOVIA

UX Research | Design | Current

Rethinking ONE Lab's batch release workflow for scientists, from a heuristic evaluation to a redesigned and tested experience.

ROLE
UX Designer intern, BIOVIA Go To Market

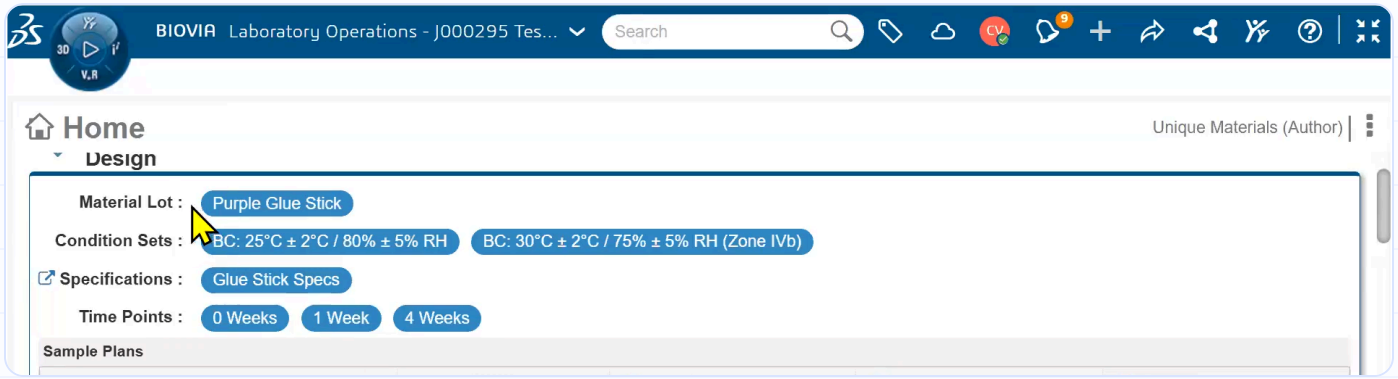

YEAR
2026

METHODS
Heuristic evaluation, task flows, journey mapping, usability testing

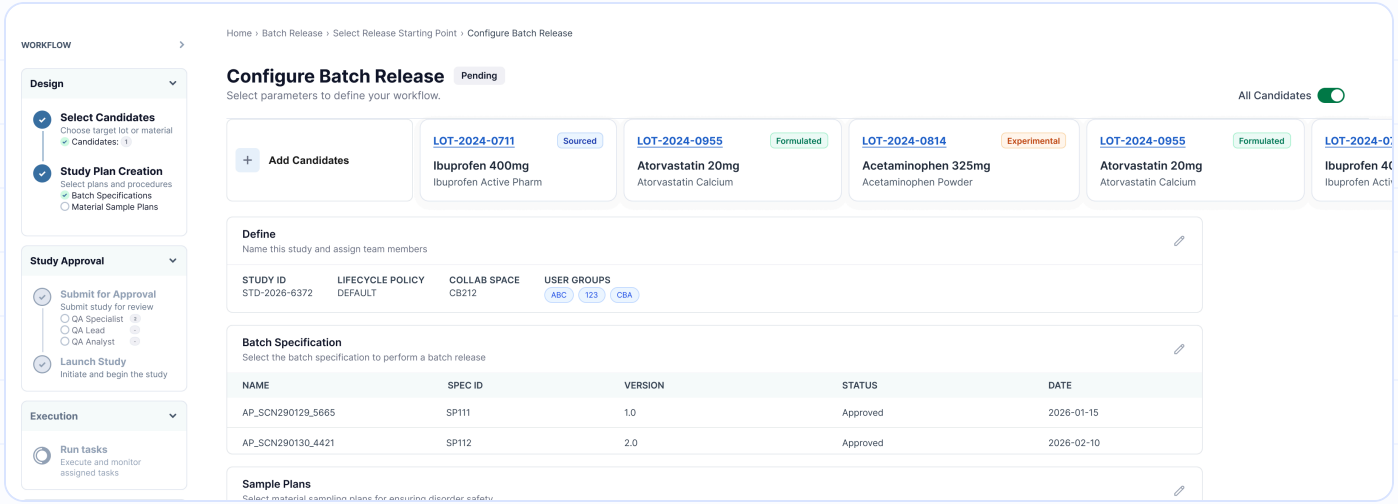

- Ran a heuristic evaluation, then mapped the task flow and journey of a batch release: create, approve, execute and finalize a study.
- Redesigned the flow around a workflow tracker, side panels that keep details in context, and grouped task views.
- Tested the prototype in a usability study, using attention heatmaps to see where scientists focused.
- Presented the framework at BIOVIA Live 2026 alongside presales and the industry portfolio manager.

> "I'm proud to share that our UX intern had the opportunity to present at BIOVIA Live 2026, showcasing the new user experience we have started designing for BIOVIA Laboratory Operations. This initiative marks the beginning of an exciting journey to rethink the laboratory experience."
>
> Anne-Sophie Valin, UX Design Manager, BIOVIA

BEFORE

AFTER

From a dense study design screen to a guided batch release flow with a clear workflow tracker. Full size in Appendix A1 and A2.

Hope & Cope Cancer Wellness Center

UX Research | Design

Helping patients and caregivers discover Hope & Cope's free cancer support at the right time, and feel ready to use it.

ROLE
UX researcher, co-presenter

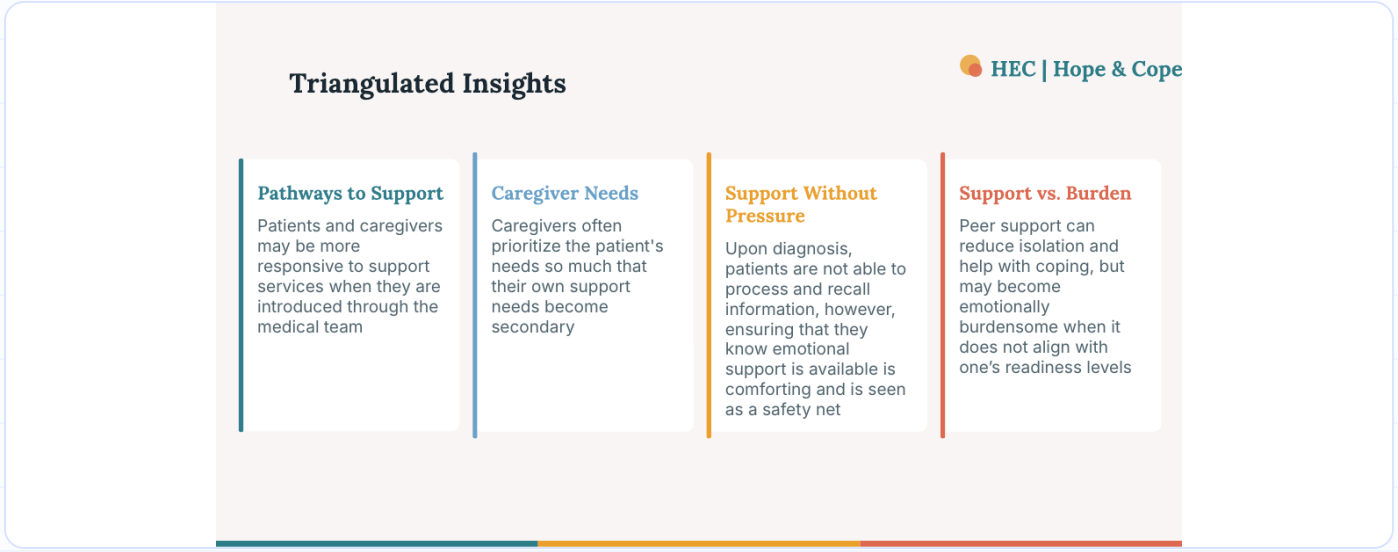

TEAM
10 researchers, HEC Montréal

METHODS
Literature review, benchmarking, site observation, interviews

- Framed four hypotheses on how people discover support and why they disengage.
- Key insight: support is far more likely to be used when the medical care team introduces it, at a moment people feel ready.
- Delivered four recommendations, from proactive caregiver outreach to flexible peer support.

> "I was impressed by the clarity of your hypotheses, the background research and framework for your questions and your potential action plan."
>
> Suzanne O'Brien, Interim Co-Executive Director

Triangulated insights: pathways to support, caregiver needs, support without pressure, and support versus burden.

Manela

Founding Designer

A SaaS platform that helps new parents understand government policy, workplace entitlements and their finances on leave.

ROLE

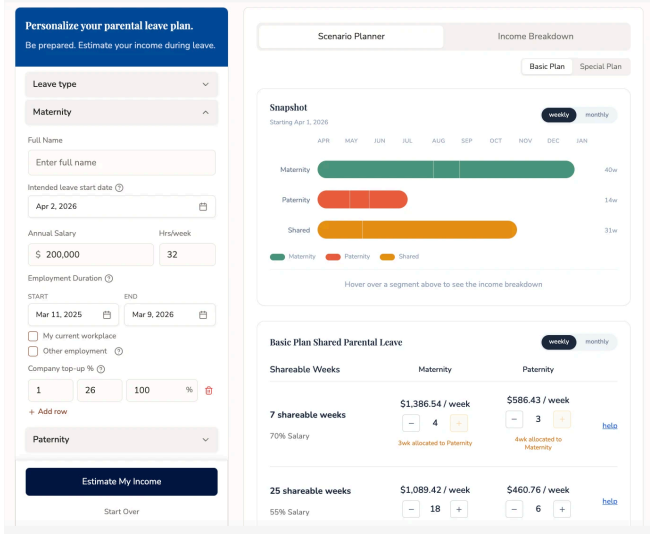

Founding designer: product, research, front-end

TOOLS

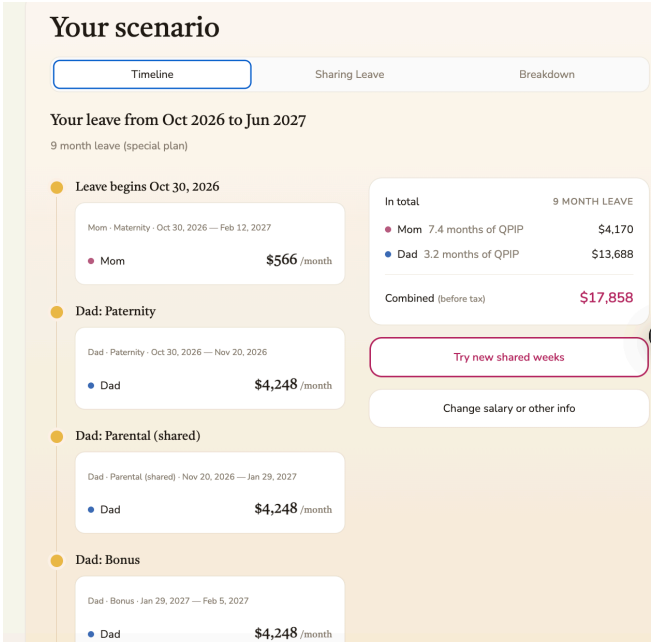

Figma, Supabase, Vercel

- Defined three core problems: isolation, hidden compliance complexity and opaque finances.
- Set design principles: clarity over completeness, trust through transparency, guided not gated.
- Turned the Scenario Planner from a dense calculator into a plain-language leave timeline parents can compare.
- Designed a guided mobile flow, leave guides and a branded employer hub.

BEFORE

AFTER

Scenario Planner before and after: from a long form and chart to a timeline of who is on leave, when, and what the household receives. Live demo: demo.manela.ca Full size in Appendix A3 and A4.

University of Montreal

UX Research · Design

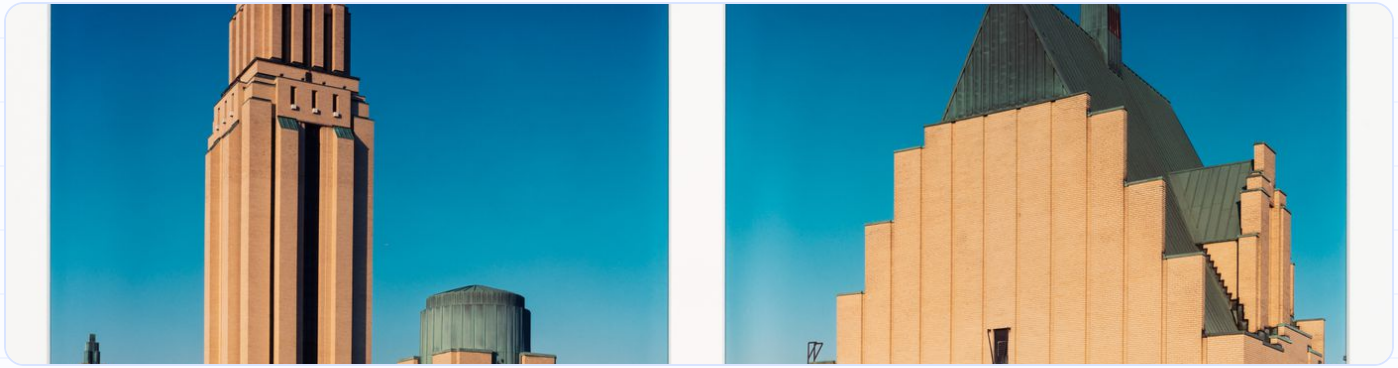

Making Université de Montréal's new French language admission requirements easier to understand for every applicant.

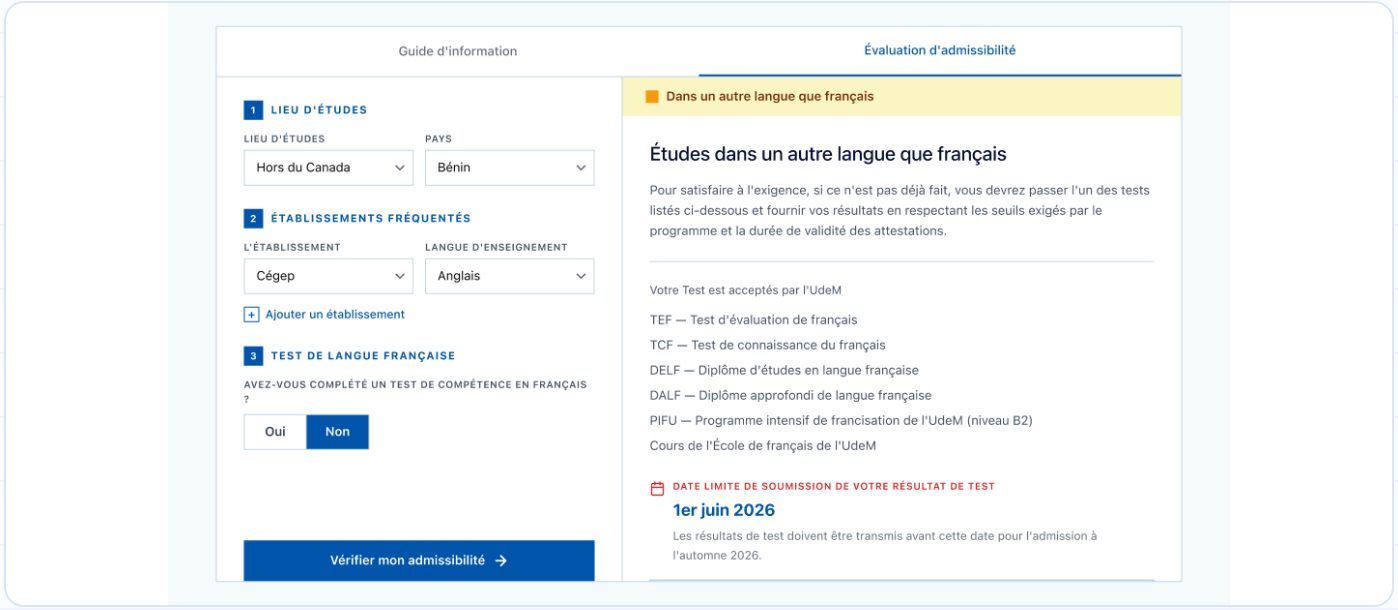

ROLE
UX research and design

PARTNER
Bureau de projets technologiques

- Starting in winter 2026, the French admission requirement changed, especially for applicants who did not study entirely in French.
- Goal: make the requirements easier to understand, instead of leaving applicants to decode conditional text.
- Redesigned the experience into two tabs: an information guide, and an eligibility check that gives a personal answer, accepted tests and the deadline.

> « On lira votre rapport avec attention et partagerons vos insights aux collègues de l'UdeM. »
>
> Thomas Bélanger, Chef de secteur, bureau de projets technologiques

The eligibility check: three short steps lead to a personalized result.

PlanMonark

UX Research · Design

A usability evaluation of PlanMonark's survey creation platform, from editing a survey to publishing it.

ROLE
UX research and UI design

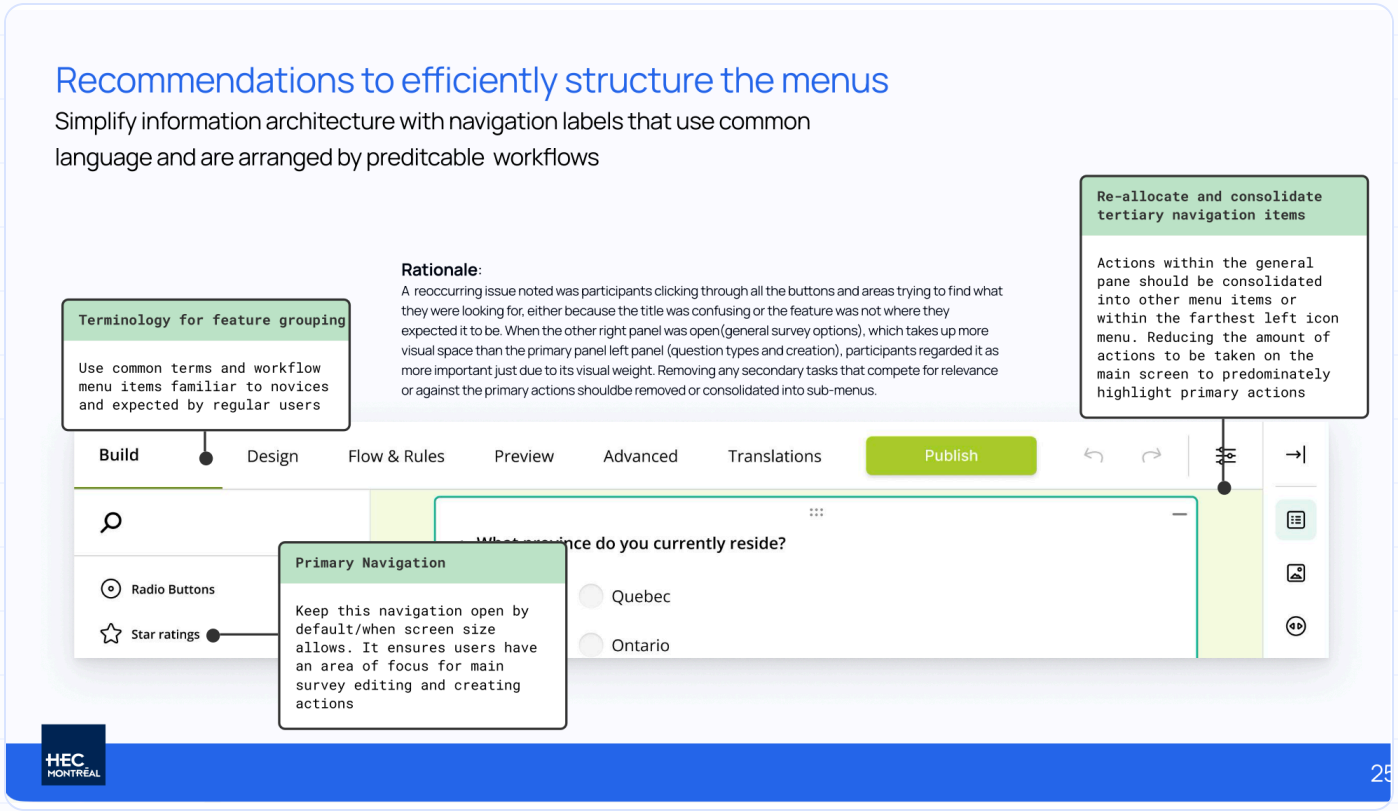

TEAM
4 researchers, HEC Montréal

METHODS
Moderated think-aloud sessions, CES, CSAT, NASA-TLX, IA comparison

- Found that information architecture was the root usability issue, and that prior survey-tool experience became a liability.
- A revised IA raised success on conditional logic from 3/16 to 9/16 ($p = 0.0156$).
- Delivered five recommendations ranked by severity, from simpler menus to a visible Publish action.

> « Un grand merci et mes félicitations pour votre excellent travail! »
> Patricia Girard, Présidente & CEO, PlanMonark

12/16	10/16	0/16	2/16
edited a question	created survey elements	customized branding	found how to publish

Recommendation: simplify the information architecture with common-language labels arranged by predictable workflows.

MovingWaldo

UX/UI Design

Canada-wide movers booking platform. Three years of onboarding optimizations and a new user profile page.

ROLE
Lead Product Designer

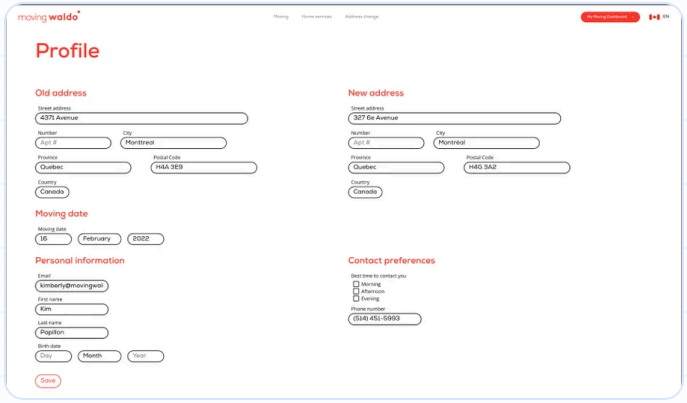

TIMELINE
2021 to 2023

TEAM
1 head of product, 1 developer, 1 designer

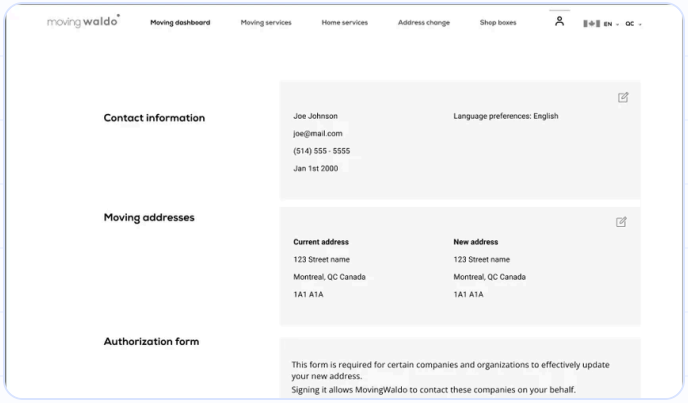

- Used session recordings and Looker Studio to find drop-offs, then reworked the onboarding funnel year by year.
- Added service cards, a confirmation screen and sales-ready questions aligned with the CRM.
- Designed the first user profile page so people could review and update their information without calling customer service.

> "She delivered a top-notch design for our project very quickly, it was a real pleasure working with her."
>
> Kevin Gilbert, Developer, MovingWaldo

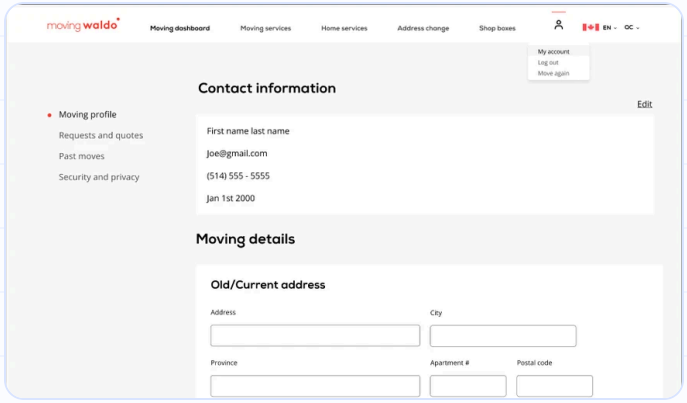

ORIGINAL

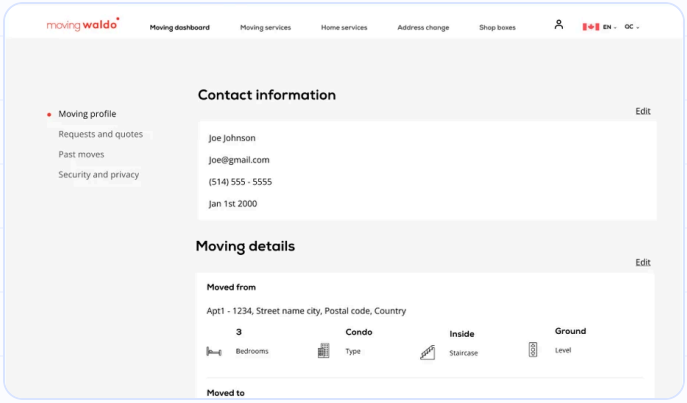

VERSION 2

VERSION 4

FINAL

User profile page iterations: from an always-editable form to a calm, scannable summary with clear edit states. Full size in Appendix A5 and A6.

PEOPLE I'VE WORKED WITH

"Kim is that colleague who brings excitement to work with her infectious positivity. Working with Kim is a delight because of her ability to effortlessly transform ideas into reality, delivering high-quality work promptly."

Alexa Polichronis, Marketing Coordinator, MovingWaldo

"Professional, hard working, adaptive, passionate, and organized are merely a few words to describe Kim. She is an asset to anyone that works with her."

Mathieu Paquette, Sales Manager, MovingWaldo

"I am even more impressed by your curiosity, empathy for the needs of the cancer patients and families we seek to serve and your openness to feedback."

Suzanne O'Brien, Interim Co-Executive Director, Hope & Cope

Appendix

Before and after, full size

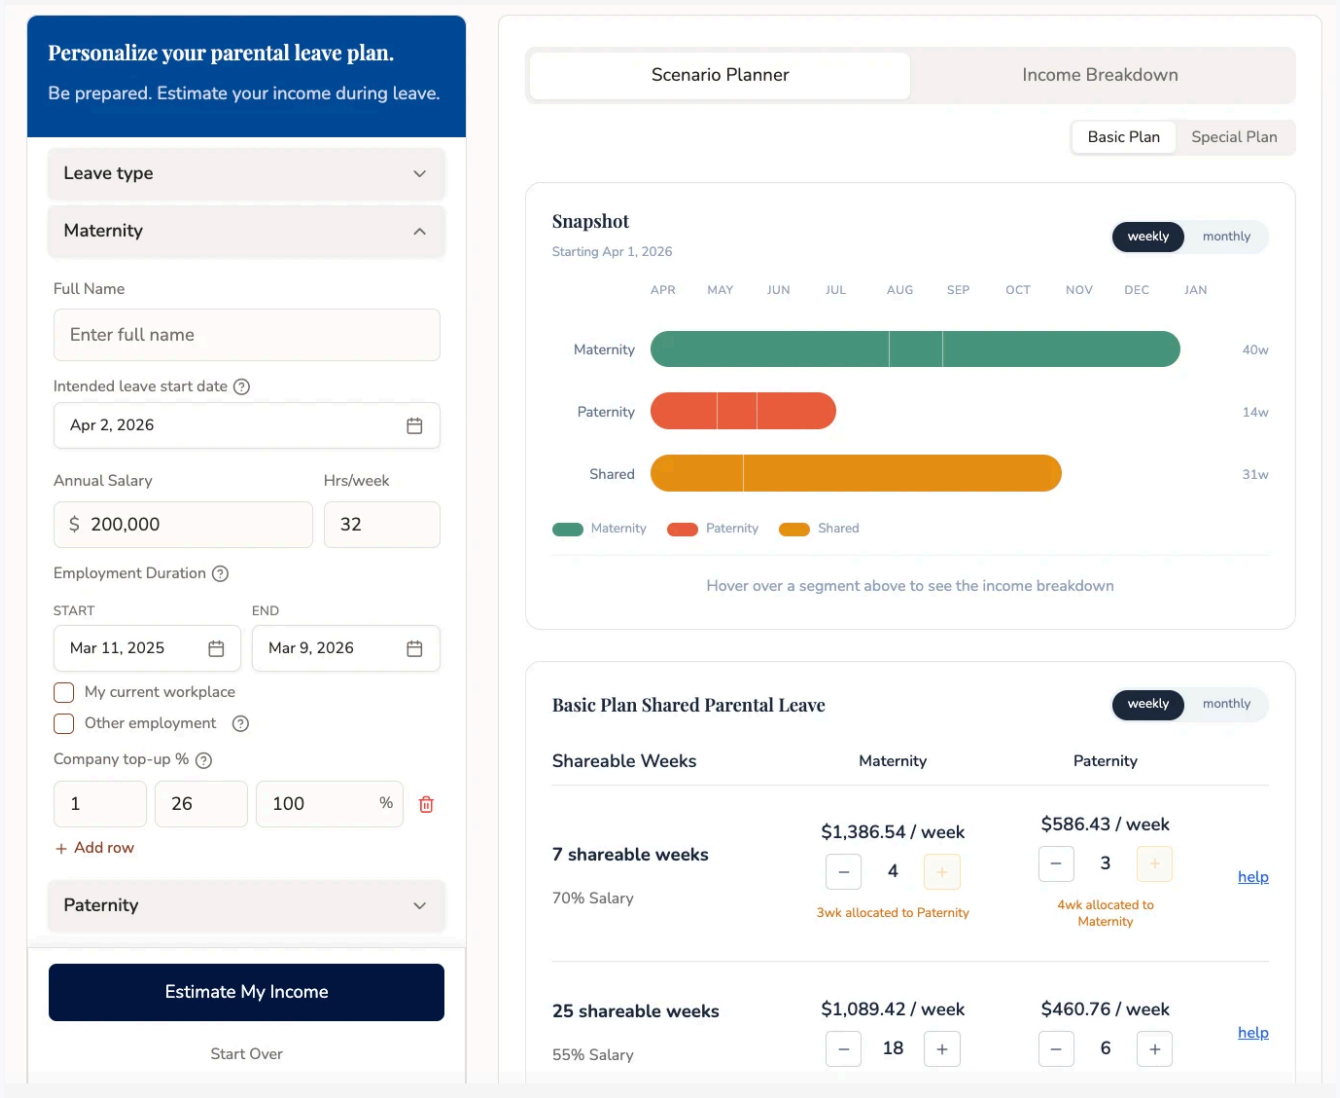

A1	BIOVIA	Before
A2	BIOVIA	After
A3	Manela	Before
A4	Manela	After
A5	MovingWaldo	Before
A6	MovingWaldo	After

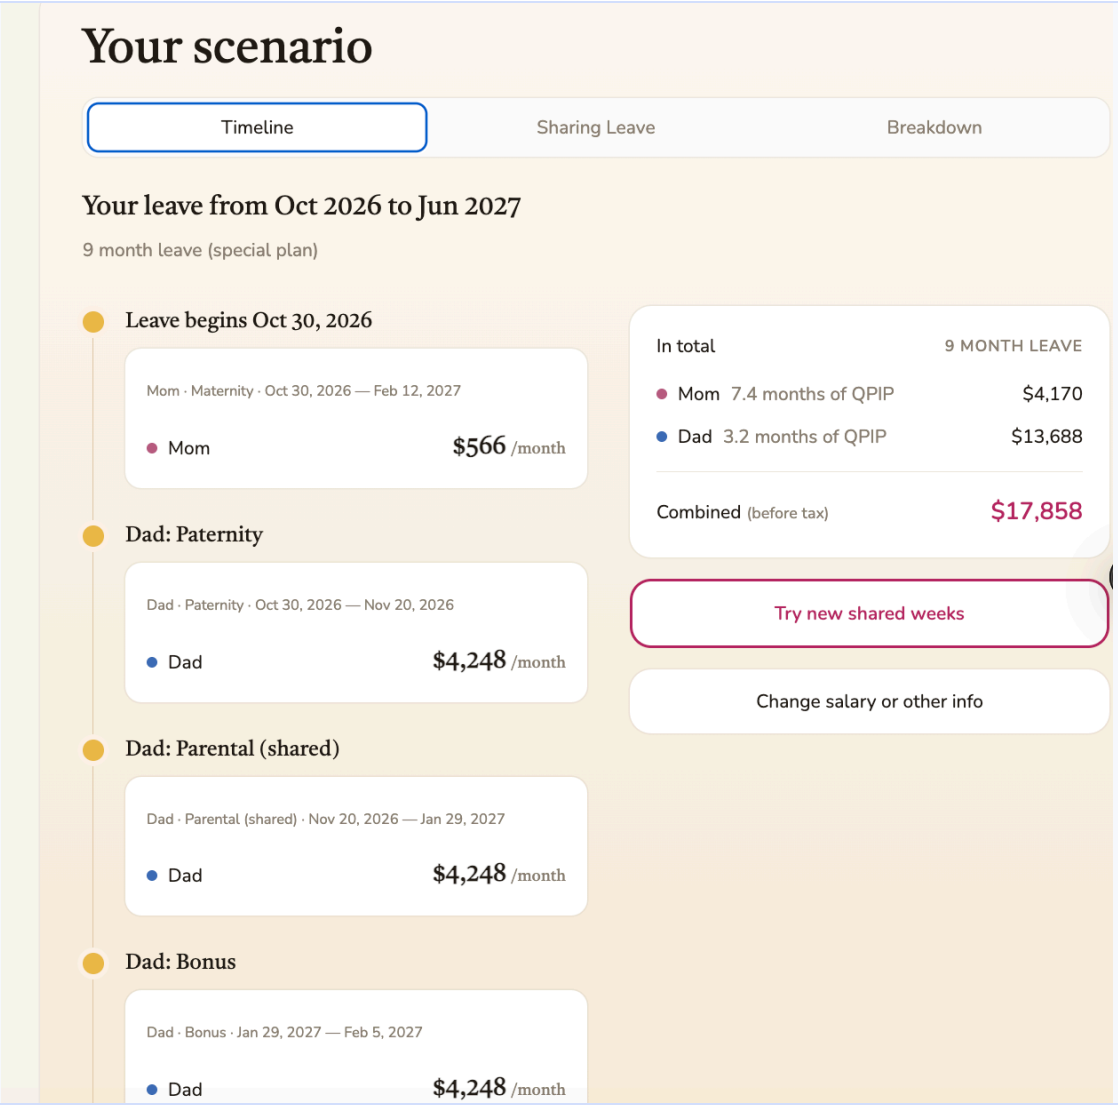

The original ONE Lab study design screen, where lots, condition sets, specifications and time points appear as dense pills and tables with no sense of where you are in the workflow.

The redesigned Configure Batch Release screen, with a workflow tracker for each phase, selected candidates as cards, and each part of the study in its own editable section.

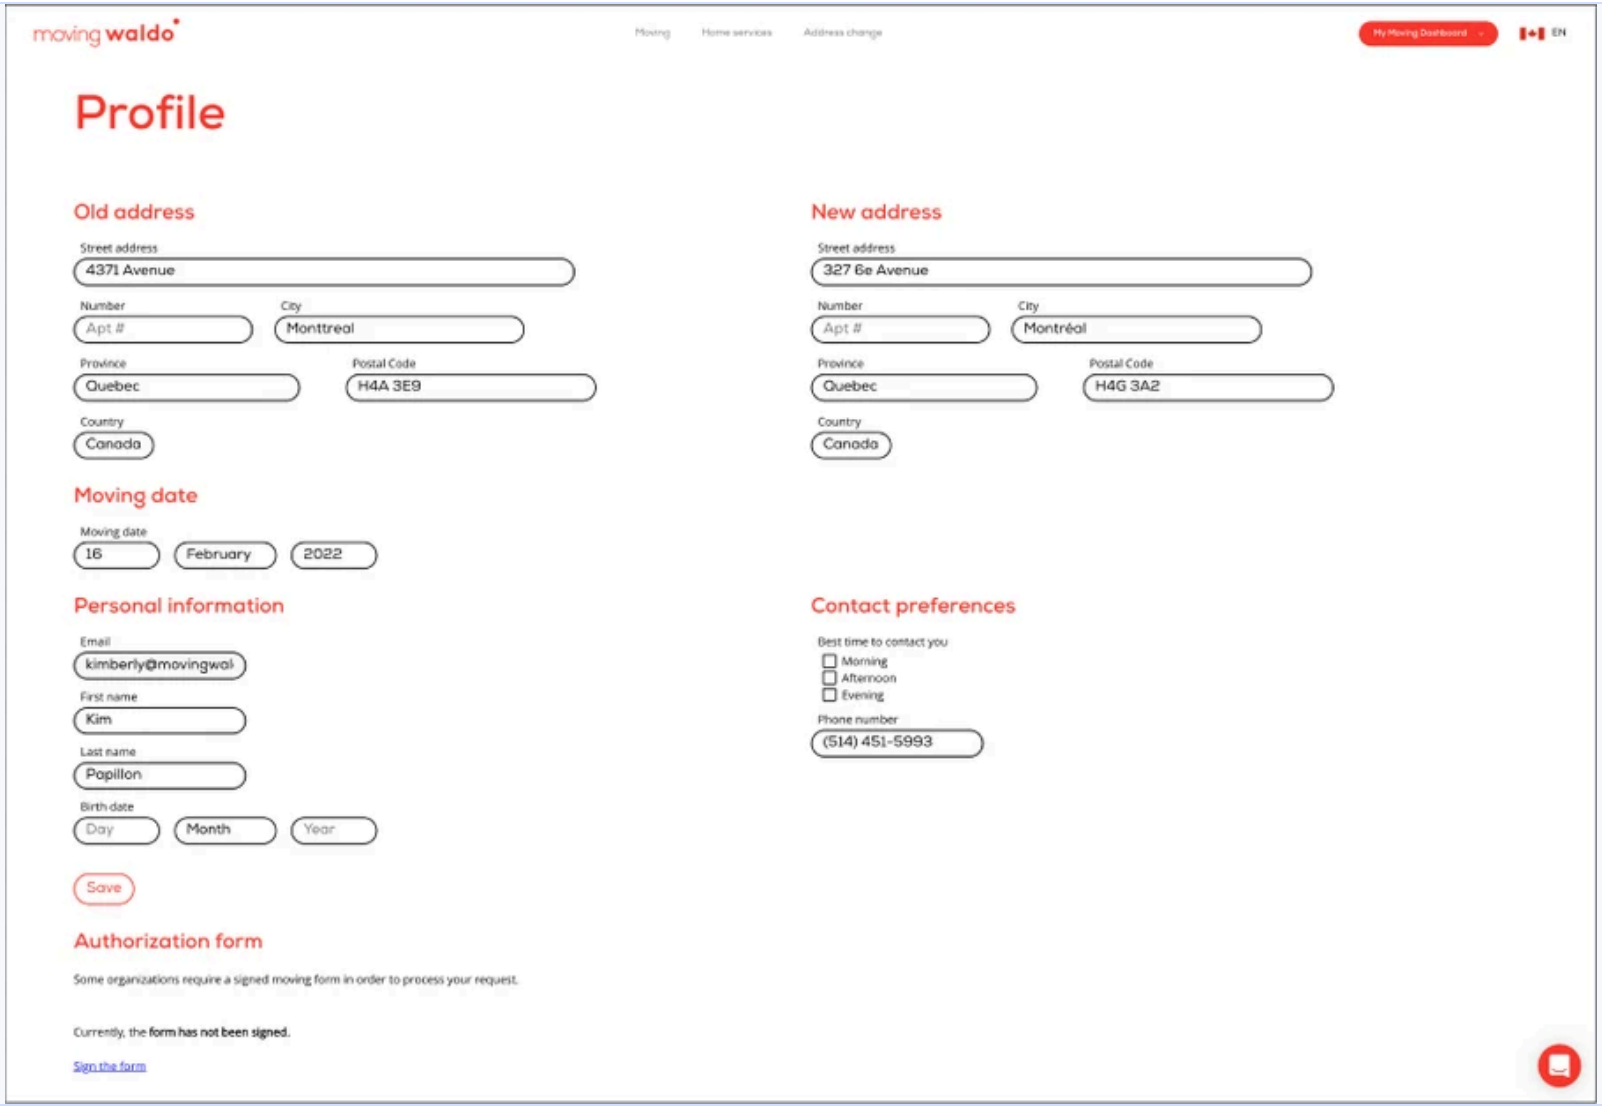

The earlier Scenario Planner asked for everything in one long form, then showed a dense chart and shareable-week tables that made it hard to see who is on leave and when.

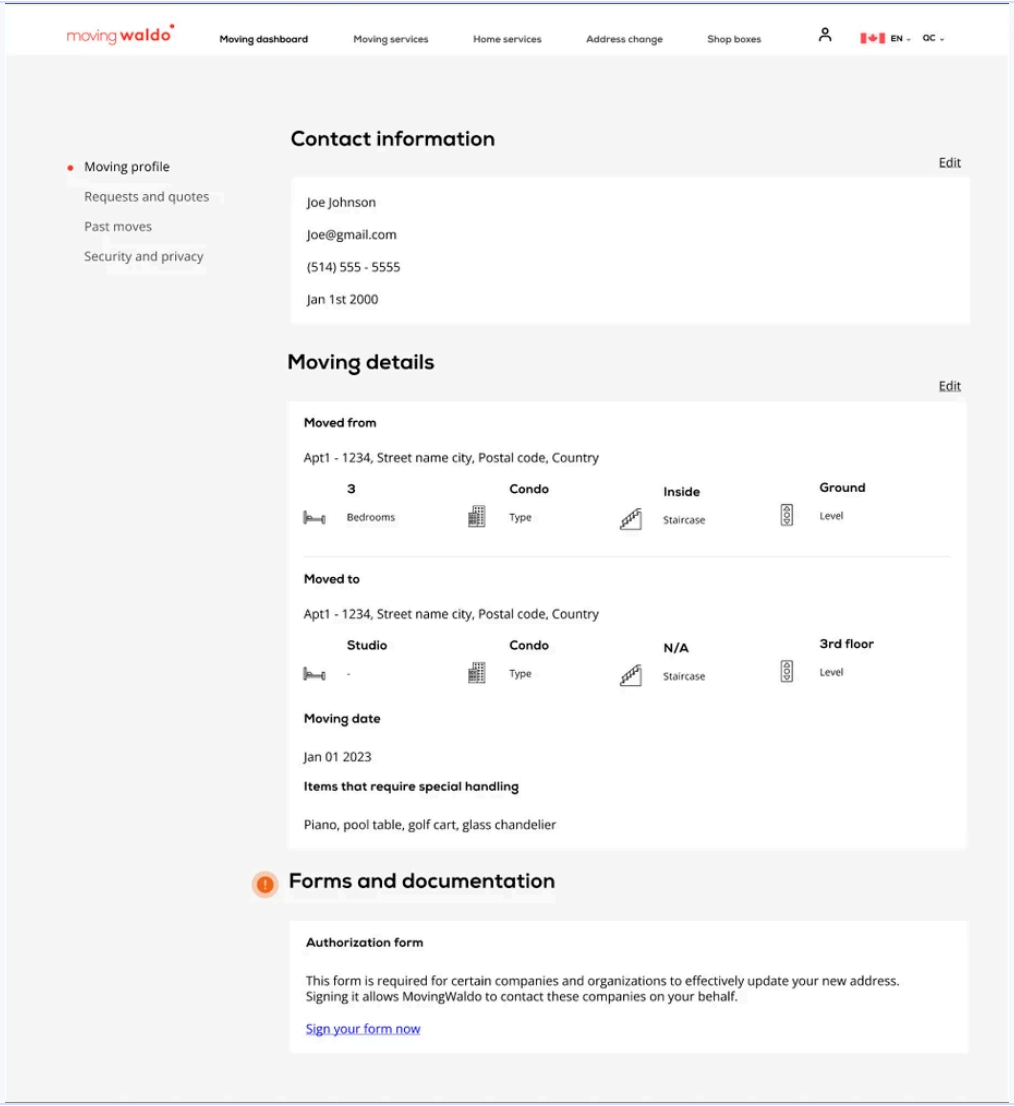

The redesigned scenario turns the result into a plain-language timeline of each parent's leave and monthly payout, with a combined total and quick ways to try new shared weeks.

A5 MovingWaldo BEFORE

The original profile page was hidden from the main menu and showed every field as an always-editable form, with no history of requests or quotes.

A6 MovingWaldo AFTER

The final moving profile is a calm, read-only summary with Edit links, icons for key move details and a clear alert when the authorization form still needs a signature.
